

LED Pixel Art — Design Sheet

Plan your emoji here before typing it into main.py

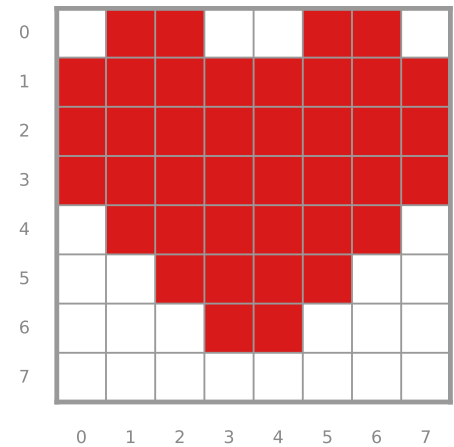

1. Colour in the squares below (or shade them with the matching letter).
2. Each row becomes one line of code, top row first, left to right.
3. A blank square = "." (off). Type the letters into main.py inside quote marks, one row per line — like the HEART example on the right.

Your design

Example: HEART

```
" . RR . RR . "  
"RRRRRRRR"  
"RRRRRRRR"  
"RRRRRRRR"  
" . RRRRRR . "  
" . . RRRR . . "  
" . . . RR . . . "  
" . . . . . . . . . . "
```
